

HUCK

HUCKLEBERRY HISTORY

Huckleberries grow wild in the high elevations of the Northwest. Seeking cool mountain air and direct sunlight, they have never been domesticated. The sweetly tart flavors of huckleberries have been celebrated in the Northwest for thousands of years when Native Americans first spent the summer and fall months high in the mountains picking berries. Today, generations later, the reverence for huckleberries remains. Every August, devoted pickers head to the mountains to gather, one by one, the dark purple berries. Pickers be warned – the succulent flavors attract both humans and bears alike, creating an age-old competition of man against beast for the most prized berries.

HUCK WINES

From the high elevations of the Cascade Mountain Range to the sunlit valleys below, two of Washington's greatest gifts from Mother Nature abound: the huckleberry and the wine grape. Huck combines the sweetly tart flavors of the huckleberry with the crisp acidity found in the best of Washington wines to make a premium blend appealing to all. Like Huck Finn himself, huckleberries remain wild and undomesticated and thrive in climates where adventure awaits. Awake your childlike thirst for exploration with Huck. Drinkers beware: Don't feed the bears.

HUCK TASTING NOTE

A deep rose color leads to aromas of ripe apricots, peaches and essence of huckleberry. This sweet wine shows flavors of tropical fruit partnered with notes of huckleberry. The acid balances the sweetness and tropical flavors.

COLUMBIA VALLEY

Washington State is the nation's second largest producer of premium wines. The high-quality wines have earned the state international recognition, critical acclaim and legions of loyal consumers. In the eastern part of the state lies Washington wine country which is made up of nine appellations. Huck grapes are sourced from the largest appellation in the state, the Columbia Valley, which covers almost 11 million acres and represents a third of Washington State's land mass. With over 17,000 acres of viniferous grape vineyards, the vast size of the area allows for a number of meso and micro climates. Sheltered by the Cascade Mountain Range, the Columbia Valley experiences long, warm summer days and cool nights, creating an ideal climate for wine.

Variety: Premium wine blended with natural huckleberry flavoring

Appellation: Columbia Valley, Washington

pH: 3.26

TA: 0.65
